Business Question and Visualization Report

Date	20 October 2026
S.ID	SWUID2026399918
Project Name	Electric Vehicle Market Performance & Insights

Visualization Development

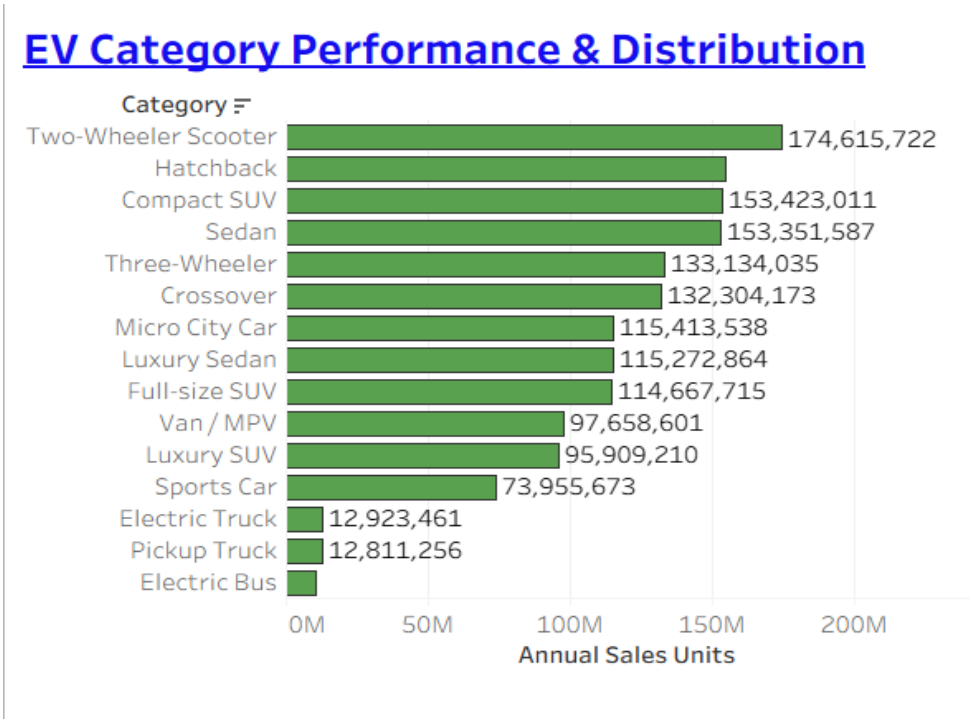

Visualization development involves creating graphical representations of data to facilitate understanding, analysis, and decision-making. In this project, Tableau is used to analyze electric vehicle (EV) market performance through seven visualizations. These visualizations help identify market distribution, sales trends, manufacturer performance, battery technology share, driving range, customer ratings, and country-wise manufacturing patterns.

Business Questions and Visualisation

The following business questions guide the analysis of the electric vehicle market using Tableau.

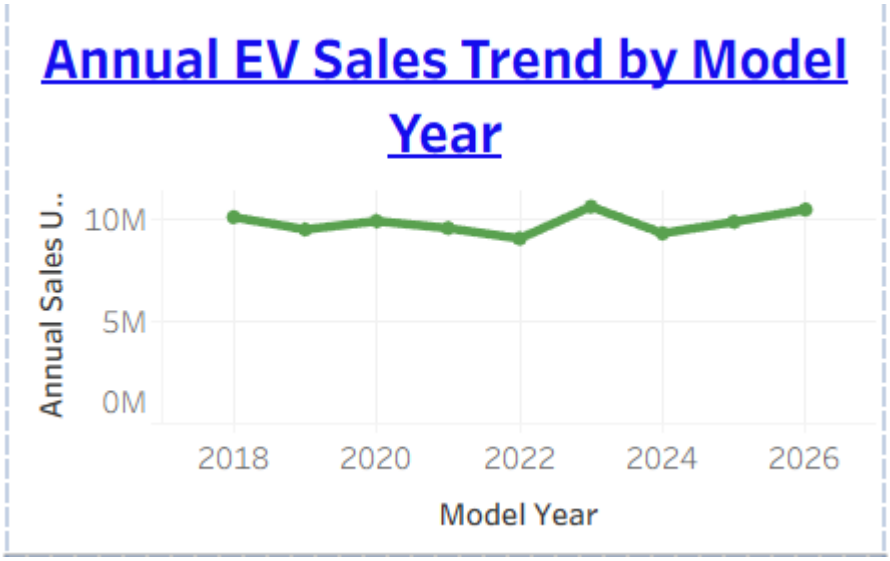

1. How is the EV category distributed in the market?

- **Visualization:** Horizontal bar chart showing EV category performance and distribution.
- **Answer:** This visualization compares the representation of different EV categories in the dataset and helps identify the categories with the highest and lowest representation.

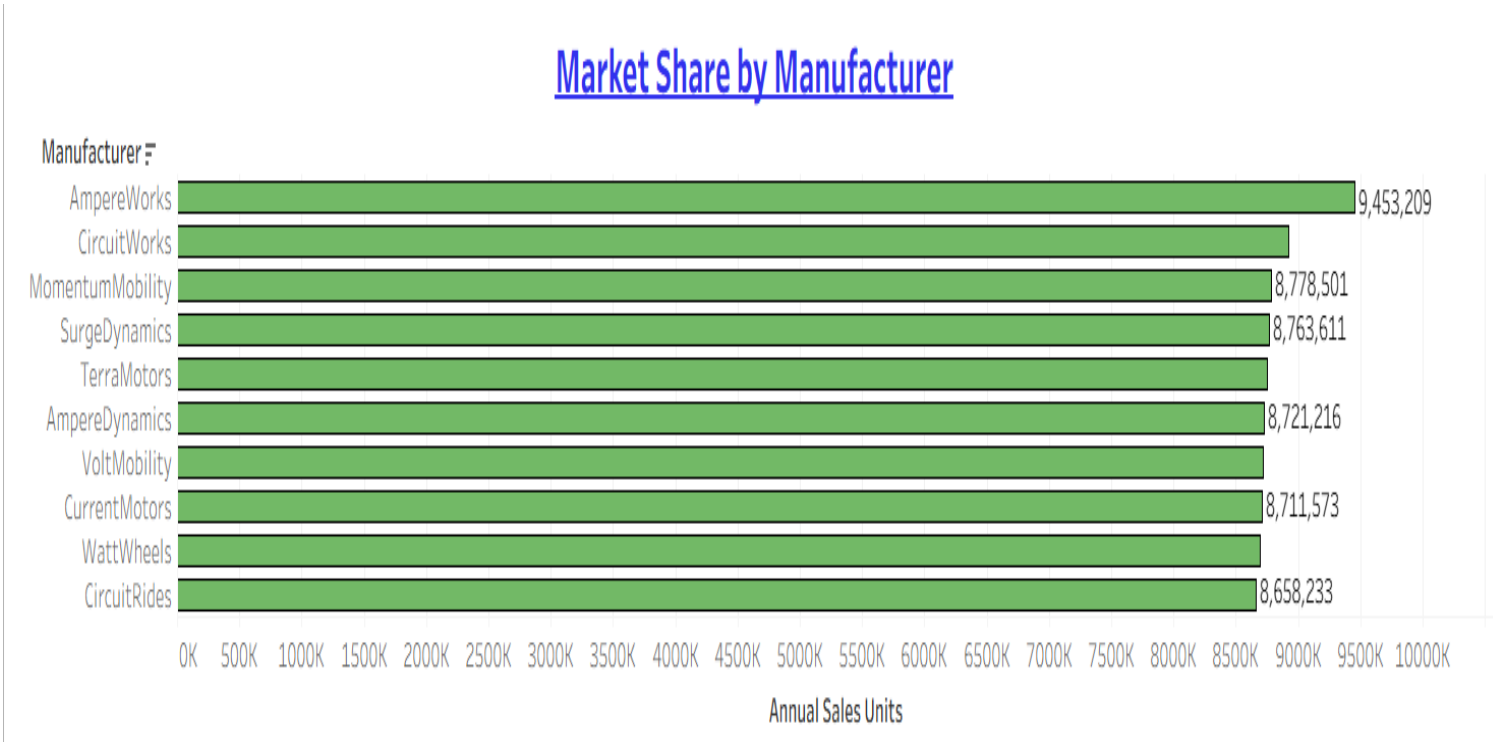

2. How have annual EV sales changed over time?

- **Visualization:** Line chart showing annual EV sales trends by model year.
- **Answer:** This visualization shows how EV sales vary across different years and helps identify periods of growth or decline in the dataset.

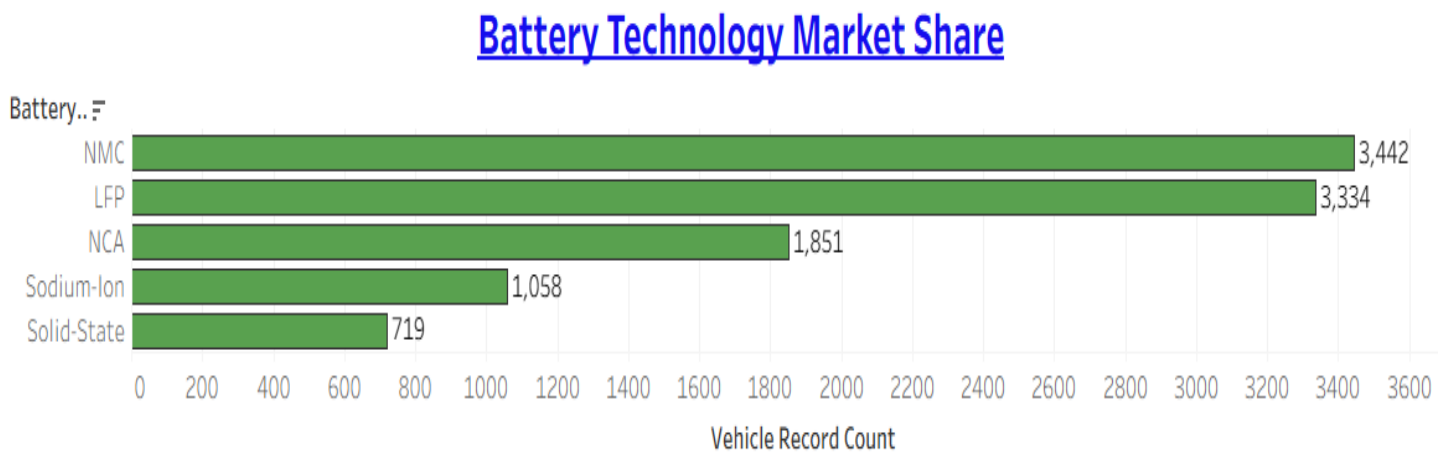

3. Which manufacturers have the highest representation in the EV market?

- **Visualization:** Horizontal bar chart comparing market share by manufacturer.
- **Answer:** This visualization compares manufacturers based on their representation in the dataset and highlights the manufacturers with relatively higher and lower market shares.

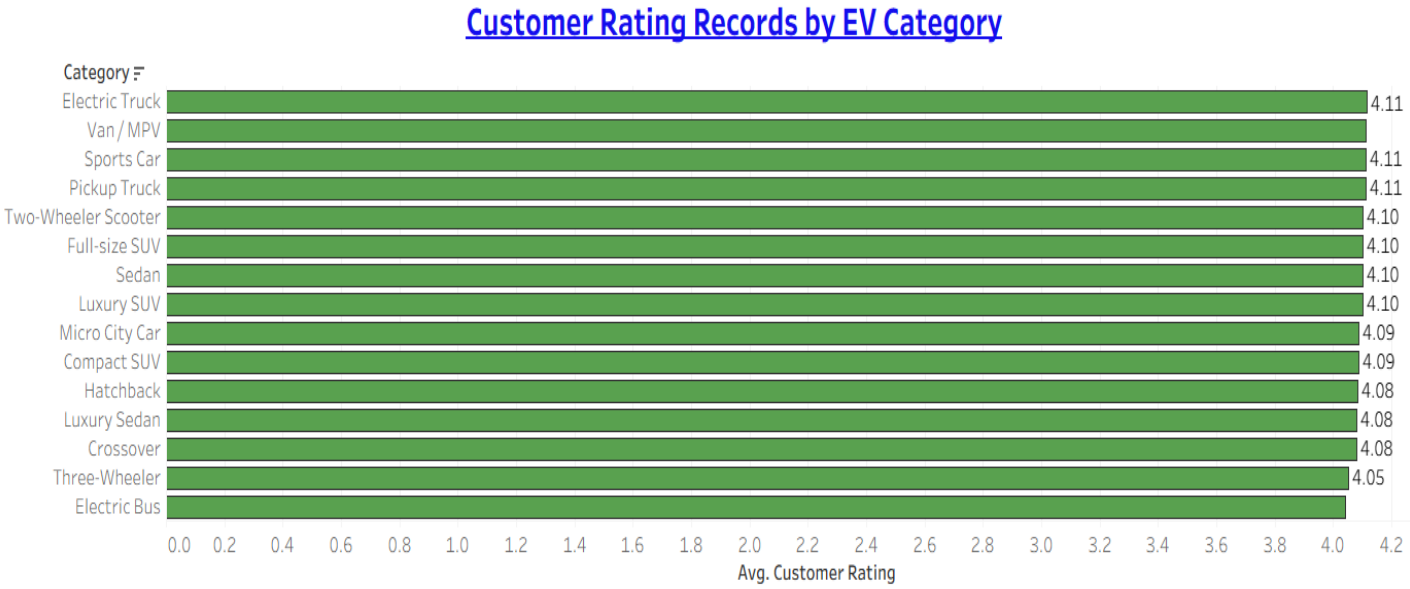

4. What is the distribution of battery technologies in electric vehicles?

- **Visualization:** Bar chart showing battery technology market share.
- **Answer:** This visualization compares the distribution of battery technologies used in electric vehicles and helps identify the most and least represented technologies in the dataset**.**
- **S**5. How does the average driving range vary across EV categories?
- **Visualization:** Horizontal bar chart comparing average driving range by EV category.
- **Answer:** This visualization compares the average driving range of different EV categories and helps identify categories with relatively higher or lower driving ranges.

6. How do customer ratings vary across EV categories?

- **Visualization:** Horizontal bar chart showing customer ratings by EV category.
- **Answer:** This visualization compares customer ratings across EV categories and helps identify differences in customer feedback among the categories represented in the dataset.

7. Which countries have the highest representation in EV manufacturing?

- **Visualization:** Horizontal bar chart showing electric vehicle distribution by manufacturing country.
- **Answer:** This visualization compares the representation of different manufacturing countries in the dataset and helps identify the countries with relatively higher and lower EV representation.
