Project Name	Electric Vehicle Market Performance & Insights

Storytelling in Tableau

Tableau Stories helps present data analysis in a logical and interactive sequence, making complex information easier to understand. In this project, Tableau is used to communicate insights into Electric Vehicle (EV) Market Performance & Insights through visualizations covering EV category distribution, annual sales trends, manufacturer market share, battery technology distribution, driving range, customer ratings, and manufacturing country distribution.

The story brings together key visualizations to help viewers explore EV market patterns, compare performance across categories, and understand the major insights derived from the dataset.

Observations

- **EV Category Distribution:** The dashboard compares the representation of different electric vehicle categories in the dataset.
- **Annual Sales Trends:** The annual sales visualization highlights changes in EV sales across different model years.
- **Manufacturer Market Share:** The manufacturer comparison identifies differences in market representation among EV manufacturers.
- **Battery Technology Distribution:** The visualization compares the representation of different battery technologies in the dataset.
- **Driving Range and Customer Ratings:** These charts allow users to compare average driving range and customer ratings across EV categories.
- **Country-wise Manufacturing Distribution:** The visualization compares EV representation across manufacturing countries.
