Project Development Phase
Performance Test

Date	20 October 2026
S. ID	SWUID2026399918
Project Name	Electric Vehicle Market Performance & Insights

Project Performance Testing:

S.No	Parameter	Screenshot / Values
1.	Data Rendered	The EV dataset was imported into Tableau and used to create visualizations representing annual EV sales, vehicle categories, manufacturers, battery technologies, driving ranges, customer ratings, and manufacturing countries. 
2.	Data Preprocessing	The dataset was imported into Tableau, and the available fields and data types were reviewed for visualization. Relevant dimensions and measures were selected for analyzing EV sales, categories, manufacturers, battery technologies, driving range, customer ratings, and manufacturing countries.

		
3.	Utilization of Filters	Interactive filters were incorporated into the dashboard to help users explore the data dynamically. The dashboard includes filters for EV Category, Manufacturer, and Model Year. A Top 10 limit is also used to focus the manufacturer visualization on leading manufacturers by annual sales units. 
4.	Calculation fields Used	The dashboard uses Tableau aggregations to summarize and compare EV market performance. These include SUM(Annual Sales Units), AVG(Driving Range), AVG(Customer Rating), and record counts for relevant categories and countries. The dashboard uses Tableau's built-in aggregations, including SUM(Annual Sales Units), AVG(Driving Range), AVG(Customer

		Rating), and record counts. No custom calculated fields were created, if applicable. 
5.	Dashboard design	The project contains seven visualizations arranged in an interactive Tableau dashboard. The visualizations cover EV category performance and distribution, annual EV sales trends, manufacturer market share, battery technology distribution, average driving range, customer ratings, and manufacturing country distribution. Filters allow users to explore different categories and time periods. 

6	Story Design	A Tableau Story was designed to present the analysis in a logical sequence through three story points: EV Market Overview, Vehicle & Battery Insights, and Manufacturer & Country Insights. This structure organizes the visualizations into meaningful sections and helps viewers explore different aspects of EV market performance. No of stories: Three
